

Confidentiality - Protecting confidentiality is dependent on being able to define and enforce certain access levels for information. In some cases, doing this involves separating information into various collections that are organized by who needs access to the information and how sensitive that information actually

Integrity - This is an essential component of the CIA Triad and designed to protect data from deletion or modification from any unauthorized party, and it ensures that when an authorized person makes a change that should not have been made the damage can be reversed.

Availability - This is the final component of the CIA Triad and refers to the actual availability of your data. Authentication mechanisms, access channels and systems all have to work properly for the information they protect and ensure it's available when it is needed. High availability systems are the computing resources that have architectures that are specifically designed to improve availability. This refers to hardware failures, upgrades or power outages to help improve availability, or it may manage several network connections to route around various network outages.
